

The REST API is now versioned. For more information, see "[About API versioning](#)."

Team discussion comments

Use the REST API to get, create, edit, and delete discussion comments on a [team discussion](#) post.

The team discussions and team discussion comments endpoints will be deprecated in GitHub Enterprise Server 3.12 in favor of GitHub Discussions. For more information about GitHub Discussions, see "[GitHub Discussions documentation](#)."

About team discussion comments

Any member of the team's [organization](#) can create and read comments on a public discussion. For more details, see "[About team discussions](#)."

These endpoints are only available to authenticated members of the team's [organization](#). OAuth access tokens require the `read:org` [scope](#). GitHub generates the team's `slug` from the team `name`.

List discussion comments

✔ Works with [GitHub Apps](#)

List all comments on a team discussion. OAuth access tokens require the `read:discussion` [scope](#).

Note: You can also specify a team by `org_id` and `team_id` using the route `GET /organizations/{org_id}/team/{team_id}/discussions/{discussion_number}/comments`.

Parameters for "List discussion comments"

Headers

accept string

Setting to `application/vnd.github+json` is recommended.

Path parameters

org string **Required**

The organization name. The name is not case sensitive.

team_slug string **Required**

The slug of the team name.

discussion_number integer **Required**

The number that identifies the discussion.

The number that identifies the discussion.

Query parameters

direction string

The direction to sort the results by.

Default: `desc`

Can be one of: `asc`, `desc`

per_page integer

The number of results per page (max 100).

Default: `30`

page integer

Page number of the results to fetch.

Default: `1`

Create a discussion comment

✔ Works with [GitHub Apps](#)

Creates a new comment on a team discussion. OAuth access tokens require the `write:discussion` [scope](#).

This endpoint triggers [notifications](#). Creating content too quickly using this endpoint may result in secondary rate limiting. See "[Secondary rate limits](#)" and "[Dealing with secondary rate limits](#)" for details.

Note: You can also specify a team by `org_id` and `team_id` using the route `POST /organizations/{org_id}/team/{team_id}/discussions/{discussion_number}/comments`.

Parameters for "Create a discussion comment"

Headers

accept string
Setting to `application/vnd.github+json` is recommended.

Path parameters

org string **Required**
The organization name. The name is not case sensitive.

team_slug string **Required**
The slug of the team name.

discussion_number integer **Required**
The number that identifies the discussion.

Body parameters

body string **Required**
The discussion comment's body text.

HTTP response status codes for "Create a discussion comment"
