

About automation for projects (classic)

In this article

Automation options

Project progress tracking

Further reading

You can configure automatic workflows to keep the status of classic project cards in sync with the associated issues and pull requests.

Notes:

- Projects, the all-new projects experience, is now available. For more information about Projects, see "[About Projects](#)" and for information about migrating your classic project, see "[Migrating from projects \(classic\)](#)."
- You can only create a new classic project board for an organization or user that already has at least one classic project board. You cannot create new classic projects for repositories. If you're unable to create a classic project board, create a project instead.

To set up automatic workflows for a repository classic project, you must have write access to the repository. Organization owners and members can configure automatic workflows on an organization-wide classic project. For more information, see "[Project \(classic\) permissions for an organization](#)."

You can automate actions based on triggering events for classic project columns. This eliminates some of the manual tasks in managing a classic project. For example, you can configure a "To do" column, where any new issues or pull requests you add to a classic project are automatically moved to the configured column. For more information, see "[Configuring automation for projects \(classic\)](#)."

You can use a classic project template to create a classic project with automation already configured. For more information, see "[About projects \(classic\)](#)."

You can also copy a classic project to reuse its customizations for similar projects. For more information, see "[Copying a project \(classic\)](#)."

Classic project automation can also help teams develop a shared understanding of a classic project's purpose and the team's development process by creating a standard workflow for certain actions.

When you close a classic project, any workflow automation configured for the classic project will pause. If you reopen a classic project, you have the option to sync automation, which updates the position of the cards on the board according to the automation settings configured for the project. For more information, see "[Reopening a closed project \(classic\)](#)" or "[Closing a project \(classic\)](#)."

Column preset

Configuration options

To do	<ul style="list-style-type: none">• Move all newly added issues here• Move all newly added pull requests here• Move all reopened issues here• Move all reopened pull requests here
In progress	<ul style="list-style-type: none">• Move all newly opened pull requests here• Move all reopened issues here• Move all reopened pull requests here• Move all pull requests that meet the base branch's minimum number of required reviews here• Move all pull requests that no longer meet the base branch's minimum number of required reviews here
Done	<ul style="list-style-type: none">• Move all closed issues here• Move all merged pull requests here• Move all closed, unmerged pull requests here

Project progress tracking

You can track the progress on your classic project. Cards in the "To do", "In progress", or "Done" columns count toward the overall project progress. If progress tracking is enabled, a progress bar appears above the classic project, on the project listing page, in the issue sidebar, and in references to the project on other classic projects.

For more information, see "[Tracking progress on your project \(classic\)](#)."
