Assign multiple owners

Use teams

Use security overview

Learn GitHub-recommended practices for your organization.

Assign multiple owners

If an organization only has one owner, the organization's projects can become inaccessible if the owner is unreachable. To ensure that no one will lose access to a project, we recommend that at least two people within each organization have the owner role. For more information, see "[Maintaining ownership continuity for your organization](#)."

Use teams

We recommend using teams to facilitate collaboration in your organization. For more information, see "[About teams](#)."

We recommend keeping teams visible whenever possible and reserving secret teams for sensitive situations. For more information, see "[Changing team visibility](#)."

Use security overview

Security overview provides high-level summaries of the security status of an organization or enterprise and makes it easy to identify repositories that require intervention. You can also use security overview to see which repositories have enabled specific security features and to configure any available security features that are not currently in use. For more information, see "[About security overview](#)."
