

Adding support resources to your project

You can create a SUPPORT file to let people know about ways to get help with your project.

To direct people to specific support resources, you can add a SUPPORT file to your repository's root, `docs`, or `.github` folder. When someone creates an issue in your repository, they will see a link to your project's SUPPORT file.

You can create default support resources for your organization or personal account. For more information, see "[Creating a default community health file](#)."

Tip: To help people find your support guidelines, you can link to your SUPPORT file from other places in your repository, such as your [README file](#).

Adding support resources to your project [🔗](#)

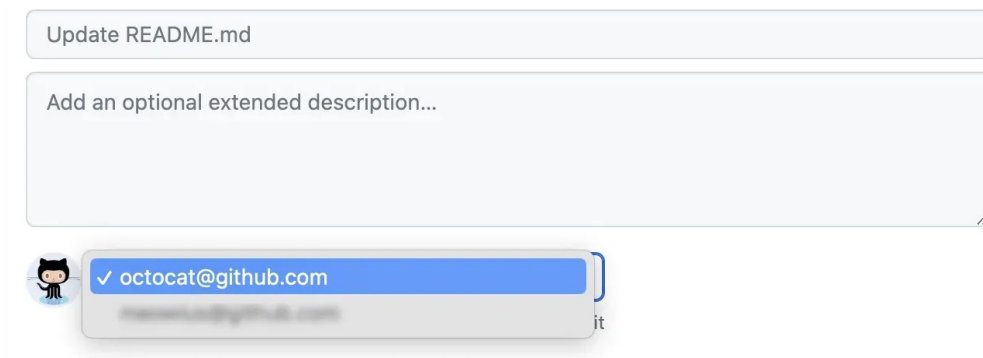

- 1 On GitHub.com, navigate to the main page of the repository.
- 2 Above the list of files, select the **Add file** ▾ dropdown menu, then click + **Create new file**.

Alternatively, you can click + in the file tree view on the left.

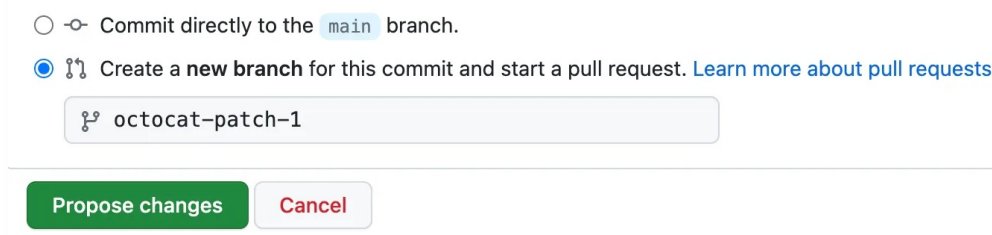

- 3 In the file name field, type `SUPPORT.md` (with all caps).

- 4 On the **Edit new file** tab, add information about how people can get support for your project.
- 5 To review your SUPPORT file, click **Preview**.
- 6 Click **Commit changes...**
- 7 In the "Commit message" field, type a short, meaningful commit message that describes the change you made to the file. You can attribute the commit to more than one author in the commit message. For more information, see "[Creating a commit with multiple authors](#)."
- 8 If you have more than one email address associated with your account on GitHub.com, click the email address drop-down menu and select the email address to use as the Git author email address. Only verified email addresses appear in this drop-down menu. If you enabled email address privacy, then a no-reply will be the default commit author email address. For more information about the exact form the no-reply email address can take, see "[Setting your commit email address](#)."

- 9 Below the commit message fields, decide whether to add your commit to the current branch or to a new branch. If your current branch is the default branch, you should choose to create a new branch for your commit and then create a pull request. For more information, see "[Creating a pull request](#)."

- 10 Click **Commit changes** or **Propose changes**.
