

Configuring visibility for organization membership

You can set visibility for new organization members across your enterprise to public or private. You can also prevent members from changing their visibility from the default.

You can also enforce your default setting on all current organization members in your instance using a command-line utility. For example, if you'd like to require every organization member's visibility to be public, you can set the default to public and enforce the default for all new members in the admin settings, and then use the command-line utility to enforce the public setting on existing members.

- 1 In the top-right corner of GitHub Enterprise Server, click your profile photo, then click **Enterprise settings**.

- 2 In the enterprise account sidebar, click **Policies**.
- 3 Under **Policies**, click **Options**.
- 4 Under "Default organization membership visibility", select the drop-down menu, and click **Private** or **Public**.
- 5 Optionally, to prevent members from changing their membership visibility from the default, select **Enforce for all enterprise members**.

Default organization membership visibility

Configure the [default membership visibility](#) for new organization members. If the setting is enforced, members won't be able to change their membership visibility from the default, only organization owners will be able to.

Private ▾

☐ Enforce for all enterprise members

- 6 If you'd like to enforce your new visibility setting on all existing members, use the `ghe-org-membership-update` command-line utility. For more information, see "[Command-line utilities](#)."
