

Managing access to a project (classic) for organization members

In this article

Setting a baseline permission level for all organization members

Further reading

As an organization owner or classic project admin, you can set a default permission level for a classic project for all organization members.

Notes:

- Projects, the all-new projects experience, is now available. For more information about Projects, see "[About Projects](#)" and for information about migrating your classic project, see "[Migrating from projects \(classic\)](#)."
- You can only create a new classic project board for an organization or user that already has at least one classic project board. You cannot create new classic projects for repositories. If you're unable to create a classic project board, create a project instead.

By default, organization members have write access to their organization's classic projects unless organization owners or classic project admins set different permissions for specific classic projects.

Setting a baseline permission level for all organization members

Tip: You can give an organization member higher permissions to classic project. For more information, see "[Project \(classic\) permissions for an organization](#)."

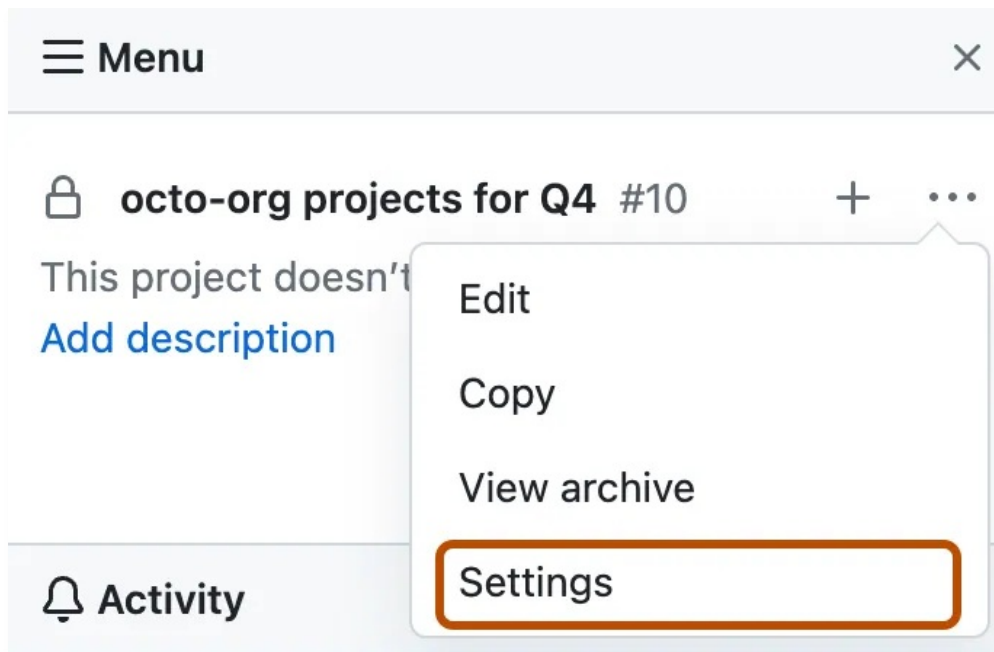

- 1 In the top right corner of GitHub.com, click your profile photo, then click  **Your organizations**.

- 2 Click the name of your organization.
- 3 Under your organization name, click  **Projects**.

- 4 Click **Projects (classic)**
- 5 In the projects list, click the name of the classic project.
- 6 On the top-right side of the classic project, click  **Menu**.
- 7 Click , then click **Settings**.

8 Under "Organization member permission", choose a baseline permission level for all organization members: **Read**, **Write**, **Admin**, or **None**.

9 Click **Save**.
