

Viewing job execution time

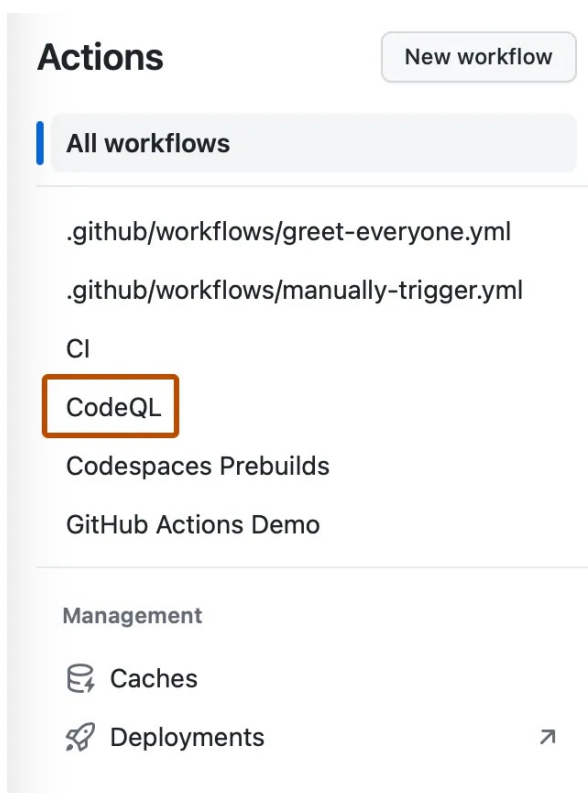

You can view the execution time of a job, including the billable minutes that a job accrued.

Billable job execution minutes are only shown for jobs run on private repositories that use GitHub-hosted runners and are rounded up to the next minute. There are no billable minutes when using GitHub Actions in public repositories or for jobs run on self-hosted runners.

- 1 On GitHub.com, navigate to the main page of the repository.
- 2 Under your repository name, click  **Actions**.

- 3 In the left sidebar, click the workflow you want to see.

- 4 From the list of workflow runs, click the name of the run to see the workflow run summary.
- 5 Under the job summary, you can view the job's execution time.
- 6 To view details about the billable job execution time, in the left sidebar under "Run details", click  **Usage**.

Note: The billable time shown does not include any minute multipliers. To view your total GitHub Actions usage, including minute multipliers, see "[Viewing your GitHub Actions usage](#)."
