

# Viewing and managing your sessions

You can view and revoke your active sessions in your settings.

You can view a list of devices that have logged into your account, and revoke any sessions that you don't recognize.

- 1 In the upper-right corner of any page, click your profile photo, then click **Settings**.

- 2 In the "Access" section of the sidebar, click **Sessions**.

- 3 Under "Web sessions", you can see your active web sessions.

Under "GitHub Mobile sessions", you can see a list of devices that have logged into your account via the GitHub Mobile app.

- 4 To see the web session details, click **See more**.

- 5 To revoke a web session, click **Revoke session**.

- 6 Optionally, to revoke a GitHub Mobile session, go back to the Sessions overview page and click **Revoke** next to the device you want to revoke.

**Note:** Revoking a mobile session signs you out of the GitHub Mobile application on that device and removes it as a second-factor option.
