

Featured GitHub integrations

In this article

Editor tools

Project management tools

Team communication tools

Use GitHub extensions to work seamlessly in repositories on GitHub.com within third-party applications.

Editor tools

You can connect to GitHub Enterprise Cloud repositories within third-party editor tools such as Unity and Visual Studio.

GitHub Enterprise Cloud for Unity

With the GitHub Enterprise Cloud for Unity editor extension, you can develop on Unity, the open source game development platform, and see your work on GitHub Enterprise Cloud. For more information, see the official Unity editor extension [site](#) or the [documentation](#).

GitHub Enterprise Cloud for Visual Studio

With the GitHub Enterprise Cloud for Visual Studio extension, you can work in GitHub Enterprise Cloud repositories without leaving Visual Studio. For more information, see the official Visual Studio extension [site](#) or [documentation](#).

GitHub for Visual Studio Code

With the GitHub for Visual Studio Code extension, you can review and manage GitHub Enterprise Cloud pull requests in VS Code. For more information, see the official VS Code extension [site](#) or [documentation](#).

Project management tools

You can integrate your personal or organization account on GitHub.com with third-party project management tools, such as Jira.

Jira Cloud and GitHub Enterprise Cloud.com integration

You can integrate Jira Cloud with your personal or organization account to scan commits and pull requests, creating relevant metadata and hyperlinks in any mentioned Jira issues. For more information, visit the [Jira integration app](#) in the marketplace.

Team communication tools

You can integrate your personal or organization account on GitHub.com with third-party team communication tools, such as Slack or Microsoft Teams.

Slack and GitHub Enterprise Cloud integration

The Slack + GitHub app lets you subscribe to your repositories or organizations and get real-time updates about activity for the following features on GitHub.com.

- Issues
- Pull requests
- Commits
- Discussions
- Releases
- GitHub Actions
- Deployments

You can also open and close issues, comment on your issues and pull requests, approve deployments, and see detailed references to issues and pull requests without leaving Slack. The app will also ping you personally on Slack if you are mentioned as part of any GitHub notifications that you receive in your channels or personal chats.

The Slack + GitHub app is also compatible with [Slack Enterprise Grid](#). For more information, see the integration's [README](#) in the `integrations/slack` repository.

Microsoft Teams and GitHub Enterprise Cloud integration

The GitHub for Teams app lets you subscribe to your repositories or organizations and get real-time updates about activity for the following features on GitHub.com.

- Issues
- Pull requests
- Commits
- Discussions
- Releases
- GitHub Actions
- Deployments

You can also open and close issues, comment on your issues and pull requests, approve deployments, and see detailed references to issues and pull requests without leaving Microsoft Teams. The app will also ping you personally on Teams if you are mentioned as part of any GitHub notifications that you receive in your channels or personal chats.

For more information, see the integration's [README](#) in the `integrations/microsoft-teams` repository.
