Applying suggested changes

Re-requesting a review

Opening an issue for an out-of-scope suggestion

Further reading

When reviewers suggest changes in a pull request, you can automatically incorporate the changes into the pull request or open an issue to track out-of-scope suggestions.

## Applying suggested changes

Other people can suggest specific changes to your pull request. You can apply these suggested changes directly in a pull request if you have write access to the repository. If the pull request was created from a fork and the author allowed edits from maintainers, you can also apply suggested changes if you have write access to the upstream repository. For more information, see "[Commenting on a pull request](#)" and "[Allowing changes to a pull request branch created from a fork](#)."

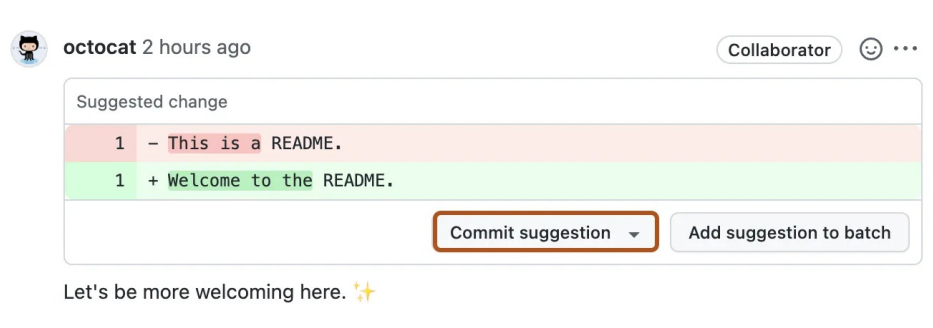

To quickly incorporate more than one suggested change into a single commit, you can also apply suggested changes as a batch. Applying one suggested change or a batch of suggested changes creates a single commit on the compare branch of the pull request.

Each person who suggested a change included in the commit will be a co-author of the commit. The person who applies the suggested changes will be a co-author and the committer of the commit. For more information about the term committer in Git, see "[Git Basics - Viewing the Commit History](#)" from the *Pro Git* book site.

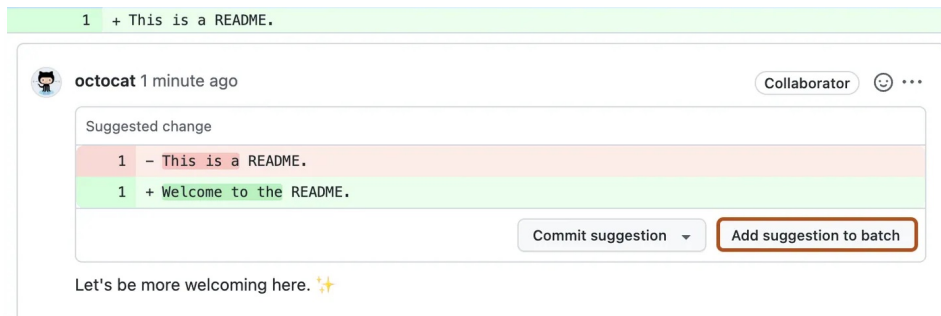

- 1 Under your repository name, click  **Pull requests**.

- 2 In the list of pull requests, click the pull request you'd like to apply a suggested change to.
- 3 Navigate to the first suggested change you'd like to apply.
  - To apply the change in its own commit, click **Commit suggestion**.

- To add the suggestion to a batch of changes, click **Add suggestion to batch**. Continue to add the suggested changes you want to include in a single commit. When you've finished adding suggested changes, click **Commit suggestions**.

- 4 In the commit message field, type a short, meaningful commit message that describes the change you made to the file or files.
- 5 Click **Commit changes**.

## Re-requesting a review [↗](#)

You can re-request a review, for example, after you've made substantial changes to your pull request. To request a fresh review from a reviewer, in the sidebar of the **Conversation** tab, click the  icon.

## Opening an issue for an out-of-scope suggestion [↗](#)

If someone suggests changes to your pull request and the changes are out of the pull request's scope, you can open a new issue to track the feedback. For more information, see "[Creating an issue](#)."
