

Changing your preferred two-factor authentication method

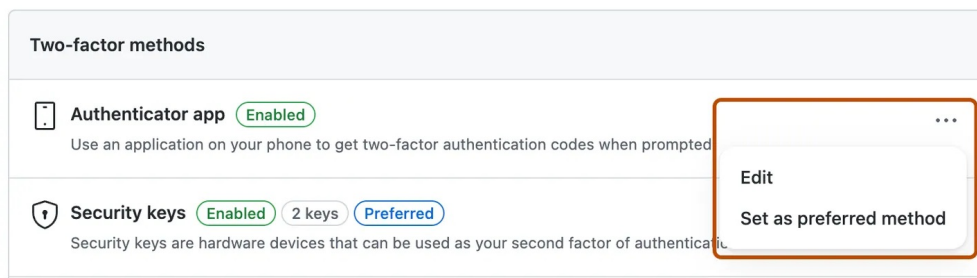

You can switch your preferred two-factor authentication (2FA) method to complete 2FA prompts with the newly selected method.

Note: You can reconfigure your 2FA settings without disabling 2FA entirely, allowing you to keep both your recovery codes and your membership in organizations that require 2FA.

- 1 In the upper-right corner of any page, click your profile photo, then click **Settings**.

- 2 In the "Access" section of the sidebar, click **Password and authentication**.
- 3 In "Two-factor methods", find the method you want to set as your preferred 2FA method. Next to that method, select ..., then click **Set as preferred method**.

A "Preferred" label is displayed next to the name of your preferred method.
