

Viewing user-owned repositories in your enterprise

You can view all repositories owned by users within your enterprise.

Who can use this feature

Enterprise owners can view user-owned repositories.

Note: Viewing user-owned repositories is currently in beta for Enterprise Managed Users and subject to change.

If your enterprise uses Enterprise Managed Users, and you've allowed users to create repositories owned by their user accounts, you can view all user-owned repositories within your enterprise.

You can also temporarily access any user-owned repository. For more information, see "[Accessing user-owned repositories in your enterprise](#)."

- 1 In the top-right corner of GitHub.com, click your profile photo, then click **Your enterprises**.
- 2 In the list of enterprises, click the enterprise you want to view.
- 3 In the enterprise account sidebar, click  **Policies**.
- 4 Under " Policies", click **Repositories**.
- 5 In the "Repository creation" section, under "Block the creation of user namespace repositories," click **View user namespace repositories in your enterprise**.

Repository creation

If enabled, members will be able to create repositories. Outside collaborators can never create repositories.

☐ **No policy**

Organization owners can choose whether to allow members to create repositories.

☐ **Disabled**

Members will not be able to create repositories.

☒ **Members can create repositories**

Members will only be allowed to create the specified types of repositories.

☒ **Private**

☒ **Internal**

☐ **Block the creation of user namespace repositories**

Members will not be able to create repositories in their enterprise-managed user account.
