

Creating and editing milestones for issues and pull requests

You can create a milestone to track progress on groups of issues or pull requests in a repository.

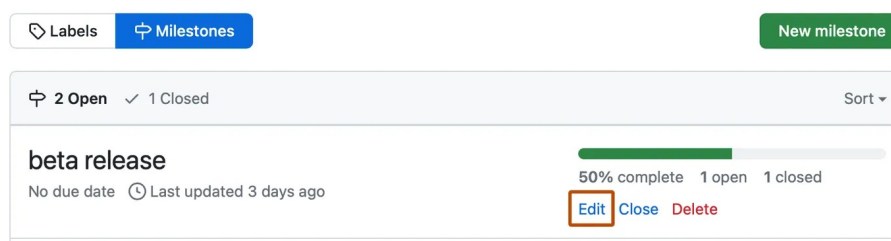

- 1 On your GitHub Enterprise Server instance, navigate to the main page of the repository.
- 2 Under your repository name, click  **Issues** or  **Pull requests**.

- 3 Next to the search field, click **Milestones**.

- 4 Choose one of these options:
 - To create a new milestone, click **New Milestone**.
 - To edit a milestone, next to the milestone you want to edit, click **Edit**.

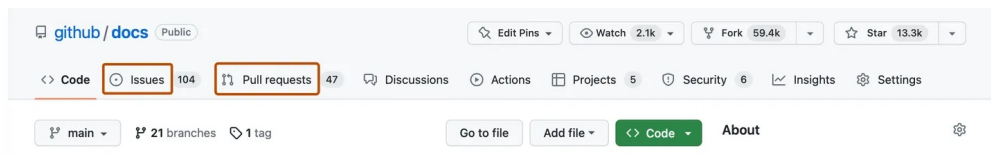

- 5 Type the milestone's title, description, or other changes, and click **Create milestone** or **Save changes**. Milestones will render Markdown syntax. For more information about Markdown syntax, see "[Basic writing and formatting syntax](#)."

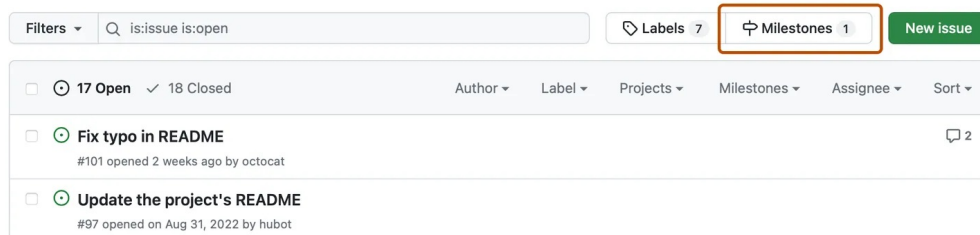

Deleting milestones

When you delete milestones, issues and pull requests are not affected.

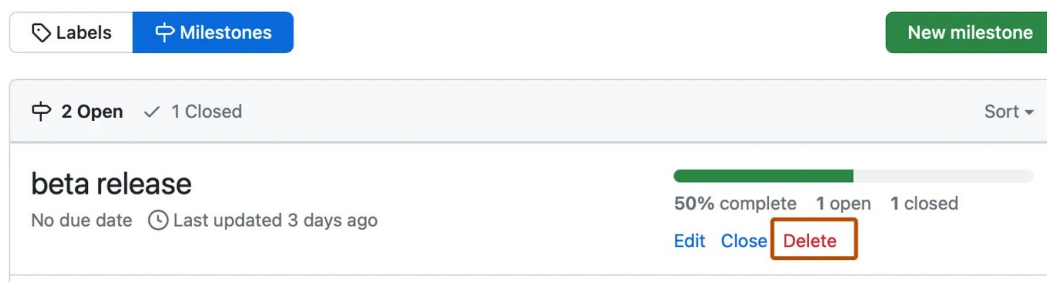

- 1 On your GitHub Enterprise Server instance, navigate to the main page of the repository.
- 2 Under your repository name, click  **Issues** or  **Pull requests**.

- 3 Next to the search field, click **Milestones**.

- 4 Next to the milestone you want to delete, click **Delete**.
