About GitHub App managers

Giving someone the ability to manage all GitHub Apps owned by the organization

Giving someone the ability to manage an individual GitHub App

Removing a GitHub App manager's permissions for the entire organization

Removing a GitHub App manager's permissions for an individual GitHub App

Organization owners can grant or revoke access for a user to manage some or all of the GitHub Apps owned by the organization.

About GitHub App managers

Organization owners can designate other users in their organization as GitHub App managers. GitHub App managers can manage the settings of some or all of the GitHub App registrations that are owned by the organization. The GitHub App manager role does not grant users access to install and uninstall GitHub Apps on an organization. For more information about the specific app settings that a GitHub App manager can control, see "[Modifying a GitHub App registration](#)."

For more information about GitHub App manager permissions, see "[Roles in an organization](#)."

Giving someone the ability to manage all GitHub Apps owned by the organization

- 1 In the top right corner of GitHub.com, click your profile photo, then click  **Your organizations**.

- 2 Next to the organization, click **Settings**.
- 3 In the left sidebar, select <> **Developer settings** then click **GitHub Apps**.
- 4 At the bottom of the "Management" section, in the search field, type the username of the person you want to designate as a GitHub App manager in the organization, then click **Grant**.
