

Collaborating with your team

Within an organization, your team can work together across projects using team discussions.

Note: Team discussions will be deprecated in GitHub Enterprise Server 3.12 in favor of GitHub Discussions. You can transfer your existing team discussions to a repository's discussions by using a migration tool that allows team admins to migrate both public and private team discussions. Click the "Transfer" button in the banner at the top of your team discussions page, then choose the repository in your organization that you want to migrate the discussions to.

For more information about GitHub Discussions, see "[GitHub Discussions documentation](#)."
