

Associating milestones with issues and pull requests

You can associate similar issues and pull requests with a milestone to better track their progress.

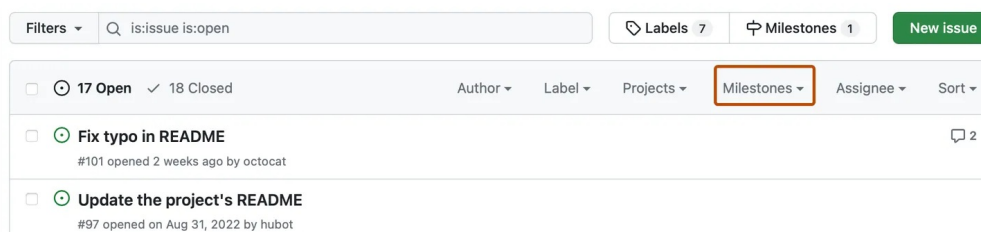

- 1 On your GitHub Enterprise Server instance, navigate to the main page of the repository.
- 2 Under your repository name, click  **Issues** or  **Pull requests**.

- 3 Select the checkbox next to the items you want associated with a milestone.

- 4 Above the list of issues or pull requests, select the **Milestone** dropdown menu.

- 5 In the "Filter milestones" field, start typing the name of an existing milestone, then click the milestone's name to associate it with the item.

As you're working on issues and pull requests, you can [track the progress of your milestone](#).

- ["Filtering issues and pull requests by milestone"](#)
