

# Subversion properties supported by GitHub

## In this article

Executable files (`svn:executable`)

MIME types (`svn:mime-type`)

Ignoring unversioned items (`svn:ignore`)

Currently unsupported properties

There are several Subversion workflows and properties that are similar to existing functionality on GitHub Enterprise Cloud.

**Note:** Subversion support will be removed from GitHub on January 8, 2024. A future release of GitHub Enterprise Server after January 8, 2024 will also remove Subversion support. To read more about this, see [the GitHub blog](#).

## Executable files ( `svn:executable` )

We convert `svn:executable` properties by updating the file mode directly before adding it to the Git repository.

## MIME types ( `svn:mime-type` )

GitHub Enterprise Cloud internally tracks the mime-type properties of files and the commits that added them.

## Ignoring unversioned items ( `svn:ignore` )

If you've set files and directories to be ignored in Subversion, GitHub Enterprise Cloud will track them internally. Files ignored by subversion clients are completely distinct from entries in a `.gitignore` file.

## Currently unsupported properties

GitHub Enterprise Cloud doesn't currently support `svn:externals` , `svn:global-ignores` , or any properties not listed above, including custom properties.
