

Managing security settings for your organization

You can manage security settings and review the audit log and integrations for your organization.

Managing security and analysis settings for your organization

You can control features that secure and analyze the code in your organization's projects on GitHub.

Restricting email notifications for your organization

To prevent organization information from leaking into personal email accounts, you can restrict the domains where members can receive email notifications about organization activity.

Reviewing the audit log for your organization

The audit log allows organization admins to quickly review the actions performed by members of your organization. It includes details such as who performed the action, what the action was, and when it was performed.

Displaying IP addresses in the audit log for your organization

You can display the source IP address for events in your organization's audit log.

Audit log events for your organization

Learn about audit log events recorded for your organization.
