

Withdrawing a repository security advisory

You can withdraw a repository security advisory that you've published.

Note: This article applies to editing repository-level advisories as a repository owner.

Users who are not repository owners can contribute to global security advisories in the GitHub Advisory Database at github.com/advisories. Edits to global advisories will not change or affect how the advisory appears on the repository. For more information, see "[Editing security advisories in the GitHub Advisory Database](#)."

If you publish a security advisory in error, you can withdraw the security advisory by contacting us through the [GitHub Support portal](#).
