

Managing how contributors report abuse in your organization's repository

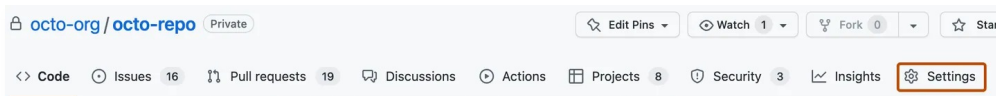

You can allow contributors to report disruptive behavior directly to repository maintainers.

Who can use this feature

Anyone with admin permissions to a repository can manage how contributors report abuse in the repository.

You can enable or disable reported content for public repositories owned by an organization.

- 1 On GitHub.com, navigate to the main page of the repository.
- 2 Under your repository name, click  **Settings**. If you cannot see the "Settings" tab, select the ... dropdown menu, then click **Settings**.

- 3 In the "Access" section of the sidebar, select  **Moderation options**, then click **Reported content**.
- 4 Under "Reported content", select a reporting permissions setting, then click **Save**.
 - **Prior contributors and collaborators** will be selected by default for repositories created after March 3, 2023.
