

The REST API is now versioned. For more information, see "[About API versioning](#)."

# Apps

Use the REST API to retrieve information about GitHub Apps and GitHub App installations.

## [GitHub Apps](#)

- [Get the authenticated app](#)
- [Create a GitHub App from a manifest](#)
- [List installation requests for the authenticated app](#)
- [List installations for the authenticated app](#)
- [Get an installation for the authenticated app](#)
- [Delete an installation for the authenticated app](#)
- [Create an installation access token for an app](#)
- [Suspend an app installation](#)
- [Unsuspend an app installation](#)
- [Create a scoped access token](#)
- [Get an app](#)
- [Get an organization installation for the authenticated app](#)
- [Get a repository installation for the authenticated app](#)
- [Get a user installation for the authenticated app](#)

## [GitHub App installations](#)

- [List repositories accessible to the app installation](#)
- [Revoke an installation access token](#)
- [List app installations accessible to the user access token](#)
- [List repositories accessible to the user access token](#)
- [Add a repository to an app installation](#)
- [Remove a repository from an app installation](#)

## [OAuth Authorizations](#)

- [Delete an app authorization](#)
- [Check a token](#)
- [Reset a token](#)
- [Delete an app token](#)

## [GitHub App webhooks](#)

- [Get a webhook configuration for an app](#)
- [Update a webhook configuration for an app](#)
- [List deliveries for an app webhook](#)

[List deliveries for an app webhook](#)

[Get a delivery for an app webhook](#)

[Redeliver a delivery for an app webhook](#)
