

Removing an outside collaborator from an organization project (classic)

As an organization owner or classic project admin, you can remove an outside collaborator's access to a classic project.

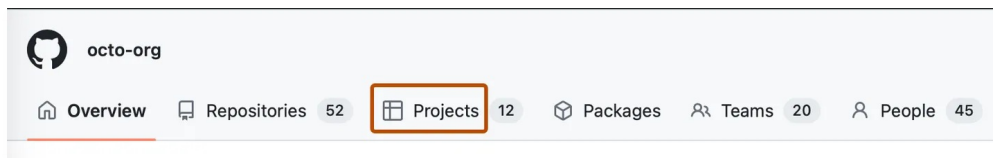

Notes:

- Projects, the all-new projects experience, is now available. For more information about Projects, see "[About Projects](#)" and for information about migrating your classic project, see "[Migrating from projects \(classic\)](#)."
- You can only create a new classic project board for an organization or user that already has at least one classic project board. You cannot create new classic projects for repositories. If you're unable to create a classic project board, create a project instead.

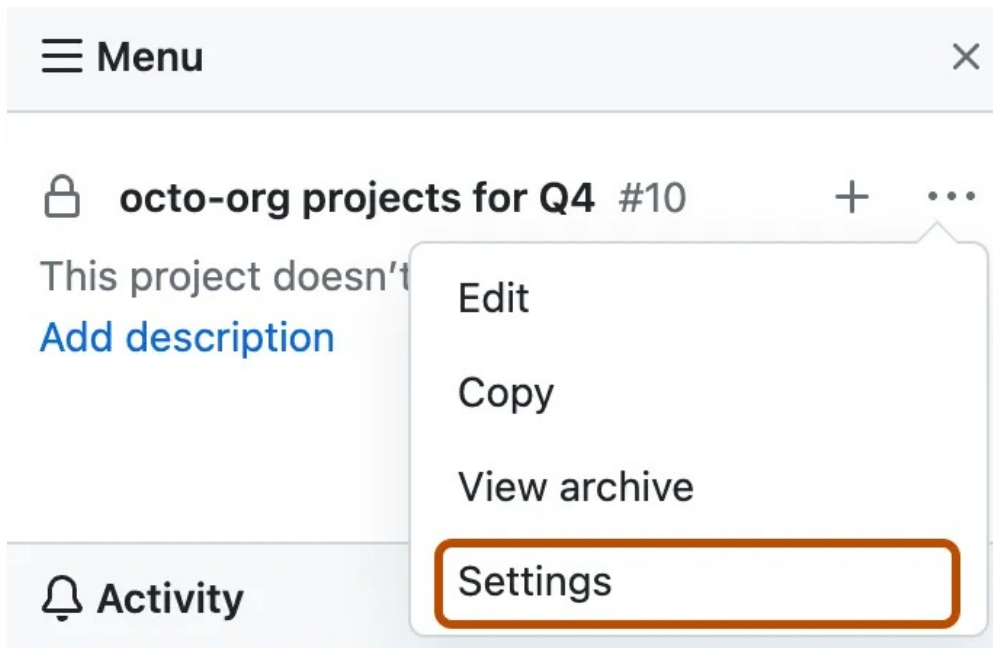

- 1 In the top right corner of GitHub.com, click your profile photo, then click  **Your organizations**.

- 2 Click the name of your organization.
- 3 Under your organization name, click  **Projects**.

- 4 Click **Projects (classic)**
- 5 In the projects list, click the name of the classic project.
- 6 On the top-right side of the classic project, click ≡ **Menu**.
- 7 Click ⋮, then click **Settings**.

- 8 In the left sidebar, click **Collaborators**.
- 9 Next to the collaborator you want to remove, click **X**.
