You can see results from autograding within the repository for your assignment.

About autograding

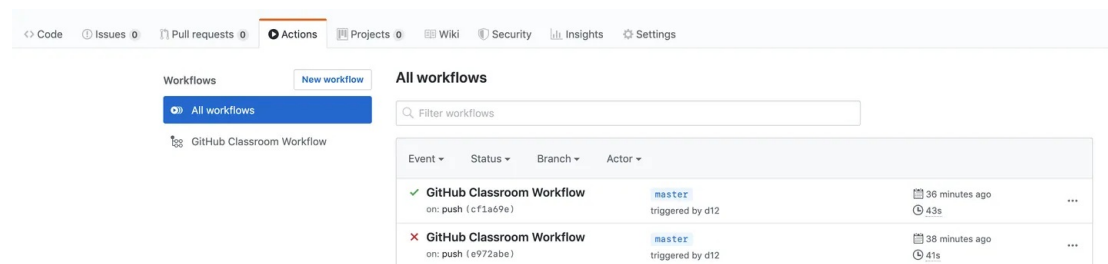

Your teacher can configure tests that automatically check your work when you push to an assignment repository on GitHub.com.

If you're a student and your instructor has configured autograding for your assignment in GitHub Classroom, you'll find autograding test results throughout your assignment repository. If all tests succeed for a commit, you'll see a green checkmark. If any tests fail for a commit, you'll see a red X. You can see detailed logs by clicking the green checkmark or red X.

Viewing autograding results for an assignment repository

GitHub Classroom uses GitHub Actions to run autograding tests. For more information about viewing the logs for an autograding test, see "[Using workflow run logs](#)."

The **Actions** tab shows the full history of test runs.

The screenshot shows the GitHub Actions interface. At the top, there's a navigation bar with tabs: Code, Issues, Pull requests, Actions (selected), Projects, Wiki, Security, Insights, and Settings. Below the navigation bar, there's a section for 'Workflows' with a 'New workflow' button and a list of workflows, including 'GitHub Classroom Workflow'. The 'All workflows' tab is selected. Below this, there's a table of workflow runs. The table has columns: Event, Status, Branch, Actor, and a column for the run details (including time and a link to the run log). The first row shows a successful run (green checkmark) for the 'GitHub Classroom Workflow' on the 'master' branch, triggered by a push event, completed 36 minutes ago. The second row shows a failed run (red X) for the same workflow on the 'master' branch, triggered by a push event, completed 38 minutes ago.

Event	Status	Branch	Actor	Run details
on: push (cf1a69e)	✓	master	triggered by d12	36 minutes ago 43s
on: push (e972abe)	✗	master	triggered by d12	38 minutes ago 41s

You can click a specific test run to review log output, like compilation errors and test failures.
