

Deleting files in a repository

In this article

About file and directory deletion

Deleting a file

Deleting a directory

You can delete an individual file or an entire directory in your repository on GitHub Enterprise Server.

Who can use this feature

People with write permissions can delete files or directories in a repository.

About file and directory deletion

You can delete an individual file in your repository or an entire directory, including all the files in the directory.

If you try to delete a file or directory in a repository that you don't have write permissions to, we'll fork the project to your personal account and help you send a pull request to the original repository after you commit your change. For more information, see "[About pull requests](#)."

If the file or directory you deleted contains sensitive data, the data will still be available in the repository's Git history. To completely remove the file from GitHub Enterprise Server, you must remove the file from your repository's history. For more information, see "[Removing sensitive data from a repository](#)."

Deleting a file

- 1 Browse to the file in your repository that you want to delete.
- 2 At the top of the file, click .
- 3 In the "Commit message" field, type a short, meaningful commit message that describes the change you made to the file. You can attribute the commit to more than one author in the commit message. For more information, see "[Creating a commit with multiple authors](#)."
- 4 Below the commit message fields, decide whether to add your commit to the current branch or to a new branch. If your current branch is the default branch, you should choose to create a new branch for your commit and then create a pull request. For more information, see "[Creating a pull request](#)."

- ☐ Commit directly to the `main` branch.
- ☒ Create a **new branch** for this commit and start a pull request. [Learn more about pull requests.](#)
