

Enabling features for your repository

You can enable, configure, and disable optional features for your repository.

Disabling issues

You may wish to turn issues off for your repository if you do not accept contributions or bug reports.

Disabling projects in a repository

Repository administrators can turn off projects and classic projects for a repository if you or your team choose not to use projects.

Managing GitHub Actions settings for a repository

You can disable or configure GitHub Actions for a specific repository.

Enabling or disabling GitHub Discussions for a repository

You can use GitHub Discussions in a repository as a place for your community to have conversations, ask questions, and post answers without scoping work in an issue.

Managing security and analysis settings for your repository

You can control features that secure and analyze the code in your project on GitHub.
