

# Adding organization members to a team

People with owner or team maintainer permissions can add organization members to teams. People with owner permissions can also invite non-members to join a team and the organization.

You can use team synchronization to automatically add and remove organization members to teams through an identity provider. For more information, see "[Synchronizing a team with an identity provider group](#)."

- 1 In the top right corner of GitHub.com, click your profile photo, then click  **Your organizations**.

- 2 Click the name of your organization.
- 3 Under your organization name, click  **Teams**.

- 4 Click the name of the team.

- 5 At the top of the team page, click  **Members**.

- 6 Above the list of team members, click **Add a member**.
- 7 Add an organization member to the team or invite a non-member to join a team.
- If the person you want to add is already a member of your organization, type their username and click **Enter**. The user will immediately be added to the team.
  - If the person you want to add is not member of your organization, type their username or email address and click **Enter**. The user will receive an email invitation to join your organization and will be added to the team once they accept the invitation.
- 8 Review the list of repositories that the new team member will have access to, then click **Add USERNAME to TEAMNAME**.

You can [edit or cancel an invitation](#) any time before the user accepts.
