

Leave feedback with pull requests

In this article

About feedback pull requests for assignments

Prerequisites

Leaving feedback in a pull request for an assignment

Further reading

You can leave feedback for your students in a special pull request within the repository for each assignment.

Who can use this feature

People with read permissions to a repository can leave feedback in a pull request for the repository.

About feedback pull requests for assignments

You can automatically create a pull request where you can provide feedback and answer a student's questions about an assignment. For more information about the review of changes in a pull request, see "[Reviewing changes in pull requests](#)."

When you enable the pull request for feedback for an assignment, GitHub Classroom will create a special pull request titled **Feedback** in the assignment repository for each student or team. The pull request automatically shows every commit that a student pushed to the assignment repository's default branch.

Prerequisites

To create and access the feedback pull request, you must enable the feedback pull request when you create the assignment. For more information, see "[Create an individual assignment](#)" or "[Create a group assignment](#)."

Leaving feedback in a pull request for an assignment

- 1 Sign into [GitHub Classroom](#).
- 2 In the list of classrooms, click the classroom with the assignment you want to review.
- 3 In the list of assignments, click the assignment you want to view.
- 4 To the right of the submission, click **Review**.
- 5 Review the pull request. For more information, see "[Commenting on a pull request](#)."
