

Dismissing a pull request review

If your repository requires reviews, you can dismiss pull request reviews that are no longer valid or are unable to be approved by the reviewer.

If a pull request has changed since it was reviewed and the person who requested changes isn't available to give an approving review, repository administrators or people with write access can dismiss a review. This changes the status of the review to a review comment. When you dismiss a review, you must add a comment explaining why you dismissed it. Your comment will be added to the pull request conversation.

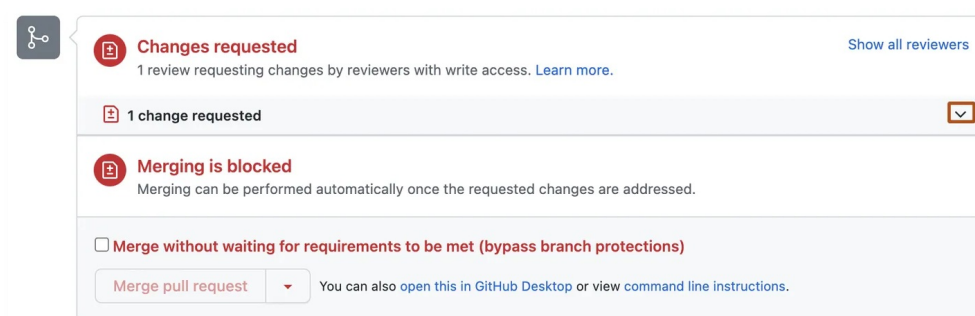

You can find a pull request where you or a team you're a member of is requested for review with the search qualifier `review-requested:[USERNAME]` or `team-review-requested:[TEAMNAME]`. For more information, see "[Searching issues and pull requests](#)."

- 1 Under your repository name, click **Pull requests**.

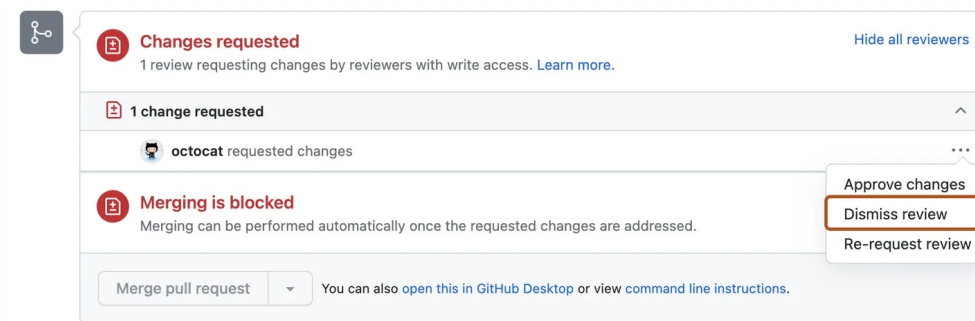

- 2 In the list of pull requests, click the pull request you'd like to review.

- 3 On the "Conversation" tab, next to the summary of reviews, click .

- 4 Next. to the review you'd like to dismiss, select the dropdown menu, then click **Dismiss review**.

5 Type your reason for dismissing the review, then click **Dismiss review**.
