

Viewing deployment activity for your repository

In this article

- Viewing the deployments dashboard
- Further reading

You can view information about deployments for your entire repository or a specific pull request.

Note: The deployments dashboard is currently in beta and subject to change.

People with read access to a repository can see an overview of all current deployments and a log of past deployment activity, if the repository's deployment workflow is integrated with GitHub Enterprise Cloud through the Deployments API or an app from [GitHub Marketplace](#). For more information, see "[Repositories](#)."

You can also see deployment information on the "Conversation" tab of a pull request.

Viewing the deployments dashboard

- On GitHub.com, navigate to the main page of the repository.
- In the right sidebar, click **Environments**.
