You can use GitHub Desktop to create, push, and view tags.

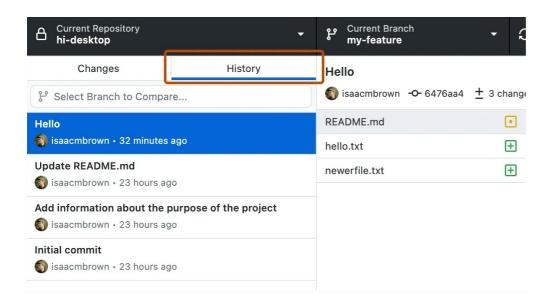

About tags in GitHub Desktop &

GitHub Desktop allows you to create annotated tags. Tags are associated with commits, so you can use a tag to mark an individual point in your repository's history, including a version number for a release. For more information about release tags, see "About releases."

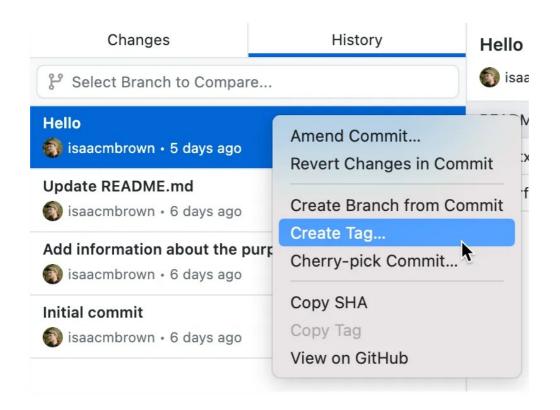

By default, GitHub Desktop will push the tag that you create to your repository with the associated commit.

Creating a tag &

1 In the left sidebar, click **History**.

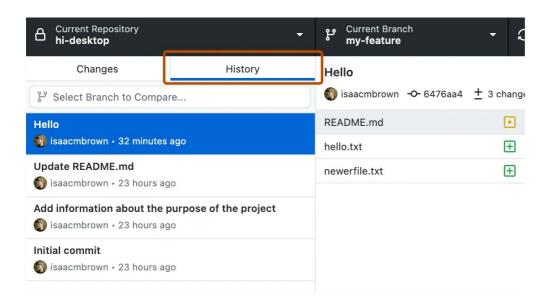

2 Right-click the commit and click **Create Tag...**.

- 3 In the "Create a Tag" dialog window, type the name of the tag.
- 4 Click Create Tag.

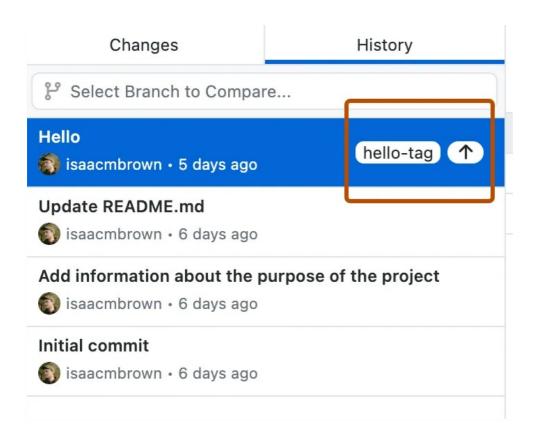

Viewing tags &

1 In the left sidebar, click **History**.

2 Click the commit.

Note: GitHub Desktop displays an arrow ↑ if the tag has not been pushed to the remote repository.

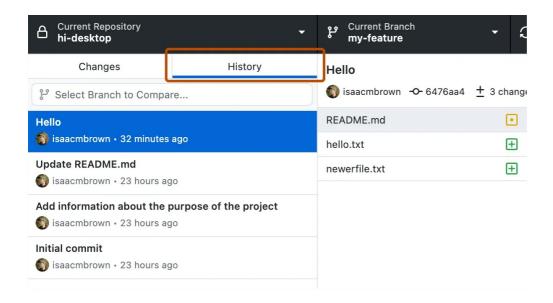

3 All tags associated with the commit are visible in that commit's metadata.

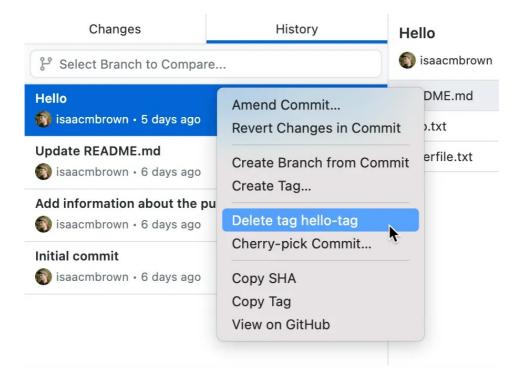

Deleting tags &

Note: You can only delete tags associated with commits that have not yet been pushed.

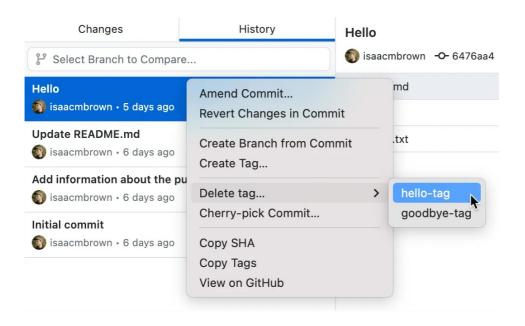

1 In the left sidebar, click **History**.

- 2 Right-click the commit.
 - If a commit has only one tag, click **Delete Tag TAG NAME**.

• If a commit has multiple tags, hover over **Delete Tag...** and then click the tag that you want to delete.
