GitHub Docs

The REST API is now versioned. For more information, see "About API versioning."

# **GitHub App webhooks**

Use the REST API to interact with webhooks for OAuth apps

## **About webhooks for GitHub Apps** @

A GitHub App's webhook allows your server to receive HTTP POST payloads whenever certain events happen for a GitHub App. For more information, see "Webhooks documentation" and "Using webhooks with GitHub Apps."

## Get a webhook configuration for an app ∂

Returns the webhook configuration for a GitHub App. For more information about configuring a webhook for your app, see "Creating a GitHub App."

You must use a <u>IWT</u> to access this endpoint.

### HTTP response status codes for "Get a webhook configuration for an app"

Status code	Description
200	ОК

#### Code samples for "Get a webhook configuration for an app"

#### Response

```
Example response Response schema

Status: 200

{ "content_type": "json", "insecure_ssl": "0", "secret": "*******", "url": "https://example.com/webhook" }
```

## Update a webhook configuration for an app &

Updates the webhook configuration for a GitHub App. For more information about configuring a webhook for your app, see "Creating a GitHub App."

You must use a JWT to access this endpoint.

#### Parameters for "Update a webhook configuration for an app"

#### Headers

accept string

Setting to application/vnd.github+json is recommended.

#### **Body parameters**

url string

The URL to which the payloads will be delivered.

content\_type string

The media type used to serialize the payloads. Supported values include json and form. The default is form.

**secret** string

If provided, the secret will be used as the key to generate the HMAC hex digest value for delivery signature headers.

insecure\_ssl string or number

Determines whether the SSL certificate of the host for url will be verified when delivering payloads. Supported values include 0 (verification is performed) and 1 (verification is not performed). The default is 0. We strongly recommend not setting this to 1 as you are subject to man-in-the-middle and other attacks.

#### HTTP response status codes for "Update a webhook configuration for an app"

Status code	Description
200	OK

### Code samples for "Update a webhook configuration for an app"

```
Example response Response schema

Status: 200

{ "content_type": "json", "insecure_ssl": "0", "secret": "*******", "url": "https://example.com/webhook" }
```

## List deliveries for an app webhook &

Returns a list of webhook deliveries for the webhook configured for a GitHub App.

You must use a JWT to access this endpoint.

## Parameters for "List deliveries for an app webhook"

#### **Headers**

accept string

Setting to application/vnd.github+json is recommended.

#### **Query parameters**

per\_page integer

The number of results per page (max 100).

Default: 30

**cursor** string

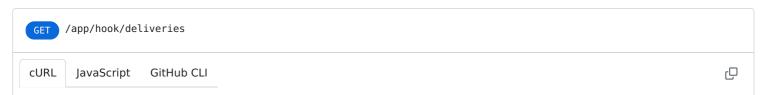

Used for pagination: the starting delivery from which the page of deliveries is fetched. Refer to the link header for the next and previous page cursors.

redelivery boolean

## HTTP response status codes for "List deliveries for an app webhook"

Status code	Description
200	ОК
400	Bad Request
422	Validation failed, or the endpoint has been spammed.
