# Viewing the vulnerability data for your enterprise

You can view vulnerability data from the GitHub Advisory Database on your GitHub Enterprise Server instance.

> **Who can use this feature**
> Site administrators can view vulnerability data on your GitHub Enterprise Server instance.

If Dependabot alerts are enabled for your enterprise, you can view all vulnerabilities that were downloaded to your GitHub Enterprise Server instance from the GitHub Advisory Database.

You can manually sync vulnerability data from GitHub.com to update the list.

Before you can view vulnerability data, you must enable Dependabot alerts. For more information, see "Enabling Dependabot for your enterprise."

1.  From an administrative account on GitHub Enterprise Server, in the upper-right corner of any page, click 🚀.

2.  If you're not already on the "Site admin" page, in the upper-left corner, click **Site admin**.

3.  In the left sidebar, under 🚀 **Site admin**, click **Vulnerabilities**.

4.  To sync vulnerability data, click **Sync Vulnerabilities Now**.
