The REST API is now versioned. For more information, see "About API versioning."

Git database

Use the REST API to interact with raw Git objects in your Git database on GitHub Enterprise Server and to list and update Git references (branch heads and tags).

About Git database 🔗

The REST API gives you access to read and write raw Git objects to your Git database on GitHub Enterprise Server and to list and update your references (branch heads and tags). For more information about using the REST API to interact with your Git database, see "Using the REST API to interact with your Git database."

Git blobs

    Create a blob

    Get a blob

Git commits

    Create a commit

    Get a commit object

Git references

    List matching references

    Get a reference

    Create a reference

    Update a reference

    Delete a reference

Git tags

    Create a tag object

    Get a tag

Git trees

    Create a tree

    Get a tree
