GitHub Discussions documentation

GitHub Discussions is a collaborative communication forum for the community around an open source or internal project. Community members can ask and answer questions, share updates, have open-ended conversations, and follow along on decisions affecting the community's way of working.

Quickstart

Start here   View all →

About discussions

Use discussions to ask and answer questions, share information, make announcements, and conduct or participate in a conversation about a project on GitHub.

Participating in a discussion

You can converse with the community and maintainers in a forum within the repository for a project on GitHub.

Moderating discussions

You can promote healthy collaboration by marking comments as answers, locking or unlocking discussions, converting issues to discussions, and editing or deleting comments, discussions, and categories that don't align with your community's code of conduct.

Popular

Granting higher permissions to top contributors

Repository administrators can promote any community member to a moderator and maintainer.

Best practices for community conversations on GitHub

You can use discussions to brainstorm with your team, and eventually move the conversation to an issue when you are ready to scope out the work.

Finding your discussions

You can easily access every discussion you've created or participated in.

Collaborating with maintainers using discussions

You can contribute to the goals, plans, health, and community for a project on GitHub by communicating with the maintainers of the project in a discussion.
