GitHub Docs

> The REST API is now versioned. For more information, see "About API versioning."

Timeline events

Use the REST API to receive events triggered by timeline activity in issues and pull requests.

About timeline events 🔗

You can use the REST API to view different types of events triggered by timeline activity in issues and pull requests. For more information about the specific events that you can receive, see "Issue event types." To view GitHub activity outside of issues and pull requests, see "GitHub event types."

You can use timeline events to display information about issues and pull requests or determine who should be notified of issue comments.

Every pull request is an issue, but not every issue is a pull request. For this reason, "shared" actions for both features, like managing assignees, labels, and milestones, are provided within the Issues endpoints.

List timeline events for an issue 🔗

✓ Works with GitHub Apps

List all timeline events for an issue.

Parameters for "List timeline events for an issue"
