Permission levels for a project board owned by a personal account

In this article

A project board owned by a personal account has two permission levels: the project board owner and collaborators.

Permissions overview 🔗

There is only one owner of a user-owned project board; this permission cannot be shared with another personal account. In addition to the owner, other people can collaborate on project boards.

There are three levels of permissions for project board collaborators:

- **Read**, which gives people permission to view a classic project.
- **Write**, which gives people permission to view a classic project, link repositories to a classic project, and interact with a classic project. For more information, see "[Linking a repository to a project (classic)](#)."
- **Admin**, which gives people permission to view a classic project, interact with a classic project, manage classic project settings, and manage other people's access to the classic project.

Owner and admin permissions for a user-owned project board 🔗

The project board owner and collaborators with admin access have full control of the project board. In addition to all the permissions allowed by project board collaborators, a project board owner and collaborator with admin access can:

- [Manage, view, and add collaborators](#)
- [Configure a project board as public or private](#)
- [Delete a project board](#)
- [Close a project board](#)
- [Reopen a closed project board](#)

Read and write permissions for a user-owned project board 🔗

Collaborators with read access to a user-owned project board can:

- View a project board
- Copy a project board
- Filter cards on a project board

Collaborators with write access to a user-owned project board can:

- View a project board
- Copy a project board
- Filter cards on a project board
- Edit a project board
- Link a repository to a project board
- Configure automation for project boards
- Copy a project board
- Add issues and pull requests to a project board
- Add notes to a project board
- Track progress on your project board
- Archive cards on a project board

Project board visibility 🔗

You can change the project board's visibility from private to public and back again. By default, user-owned project boards are private. For more information, see "[Changing project (classic) visibility](#)."
