Supported browsers

In this article

For the best experience with GitHub Enterprise Server, we recommend using the latest version of Chrome, Edge, Firefox, or Safari.

About web browser support for GitHub Enterprise Server 🔗

We design GitHub Enterprise Server with the latest web browsers in mind. We recommend that you use the latest version of one of the following browsers.

- Apple Safari
- Google Chrome
- Microsoft Edge
- Mozilla Firefox

If you do not use the latest version of a recommended browser, or if you use a browser that is not listed above, GitHub Enterprise Server or some features may not work as you expect, or at all.

For more information about how we maintain browser compatibility for GitHub's products, see the `github/browser-support` repository.

Extended support for recommended web browsers 🔗

Some browser vendors provide extended support releases. We do our best to ensure that GitHub Enterprise Server functions properly in the latest extended support release for:

- Chrome's extended stable channel
- Edge's Extended Stable Channel
- Firefox's Extended Support Release (ESR)

In earlier extended support releases, GitHub Enterprise Server may not work as you expect, and some features may not be available.

Beta and developer builds 🔗

You may encounter unexpected bugs in beta and developer builds of our supported browsers. If you encounter a bug on GitHub Enterprise Server in one of these unreleased builds, please verify that it also exists in the stable version of the same browser. If the bug only exists in the unstable version, consider reporting the bug to the browser

developer.
