Getting started

Set up Git

At the heart of GitHub Enterprise Server is an open source version control system (VCS) called Git. Git is responsible for everything GitHub Enterprise Server-related that happens locally on your computer.

Connect with SSH

You can connect to GitHub Enterprise Server using the Secure Shell Protocol (SSH), which provides a secure channel over an unsecured network.

Create a repository

After you create your repository on GitHub Enterprise Server, you can customize its settings and content.

Basic formatting syntax

Create sophisticated formatting for your prose and code on GitHub with simple syntax.

Popular

About pull requests

Pull requests let you tell others about changes you've pushed to a branch in a repository on GitHub Enterprise Server. Once a pull request is opened, you can discuss and review the potential changes with collaborators and add follow-up commits before your changes are merged into the base branch.

Authentication

Keep your account and data secure with features like two-factor authentication, SSH, and commit signature verification.

Add a project locally

Putting your existing work on GitHub Enterprise Server can let you share and collaborate in lots of great ways.

Manage remote repositories

Learn to work with your local repositories on your computer and remote repositories hosted on GitHub Enterprise Server.

GitHub Pages

You can create a website directly from a GitHub Enterprise Server repository.
