This version of GitHub Enterprise was discontinued on 2023-03-15. No patch releases will be made, even for critical security issues. For better performance, improved security, and new features, upgrade to the latest version of GitHub Enterprise. For help with the upgrade, contact GitHub Enterprise support.

Managing access to your personal repositories

You can give people collaborator access to repositories owned by your personal account.

Inviting collaborators to a personal repository

You can add users as collaborators to your personal repository.

Removing a collaborator from a personal repository

When you remove a collaborator from your project, they lose read/write access to your repository. If the repository is private and the person has created a fork, then that fork is also deleted.

Removing yourself from a collaborator's repository

If you no longer want to be a collaborator on someone else's repository, you can remove yourself.
