Managing alerts that have been automatically dismissed by an alert rule
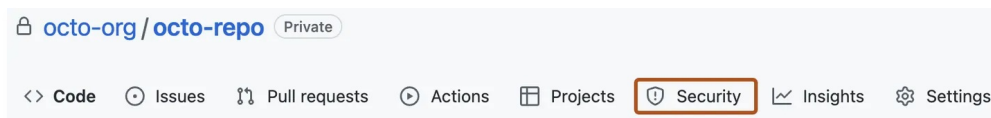

You can filter to see which alerts have been auto-dismissed by an alert rule, and you can reopen dismissed alerts.

> **Note:** Dependabot alert rules are currently in beta and are subject to change.

Managing automatically dismissed alerts 🔗

> **Note:** The Dependabot alerts page defaults to showing open alerts. To filter and view auto-dismissed alerts, you must first clear the `is:open` default filter from the view.

1. On GitHub.com, navigate to the main page of the repository.

2. Under the repository name, click ⊙ **Security**. If you cannot see the "Security" tab, select the ••• dropdown menu, and then click **Security**.

3. To filter to see all closed alerts, click ✓ **Closed**. Alternatively, use the `is:closed` filter query in the search bar.

4. To see all auto-dismissed alerts, select **Closed as**, then in the dropdown menu, click **Auto-dismissed**.

Dependabot alerts

5 To reopen an auto-dismissed alert, to the left of the alert title, click the checkbox adjacent to the alert, then click **Reopen**.
