Viewing deployment history

View current and previous deployments for your repository.

> **Note:** Deployment history is currently in beta and subject to change.

About deployment history ⧉

You can deliver deployments through GitHub Actions and environments or with the REST API and third party apps. For more information about using environments to deploy with GitHub Actions, see "[Using environments for deployment](#)." For more information about deployments with the REST API, see "[Repositories](#)."

On the deployments page of your repository, you can view the following aspects of your deployments.

- Currently active deployments across various environments
- Deployments filtered by environment
- Your repository's full deployment history
- Associated commits that triggered the deployment
- Connected GitHub Actions workflow logs
- The deployment URL (if one exists)
- The source pull request and branch related to each deployment
- Deployment statuses. For more information about deployment statuses, see "[Deployments](#)."

By default, the deployments page shows currently active deployments from select environments and a timeline of the latest deployments for all environments.

Viewing your repository's deployment history ⧉

In the right-hand sidebar of the home page of your repository, click **Deployments**.

Viewing an environment's deployment history ⧉

To view recent deployments for a specific environment, under **Deployments**, click any currently active or recent environment.

Viewing commits that triggered deployments ⧉

To view the associated commit that triggered the deployment, to the right of the deployment status badge, click the commit message.

> **Note:** Deployments from commits originating from a fork outside of the repository will not show links to the source pull request and branch related to each deployment. For more information about forks, see "[About forks](#)."

Navigating to deployment URLs 🔗

To view the URL for the deployment, to the right of the commit message, click ⬈.

> **Note:** If a deployment does not have an associated URL, the ⬈ button is not displayed.

Accessing workflow run logs 🔗

To navigate to the workflow run logs associated with the deployment, to the right of the commit message, click ···. Then click **View logs**.

> **Note:** If a deployment does not have an associated workflow run, the ··· button is not displayed.
