Monitoring and troubleshooting workflows

You can view the status and results of each step in your workflow, debug a failed workflow, search and download logs, and view billable job execution minutes.

> **Note:** GitHub-hosted runners are not currently supported on GitHub Enterprise Server. You can see more information about planned future support on the GitHub public roadmap.

About monitoring and troubleshooting

Using the visualization graph

Adding a workflow status badge

Viewing workflow run history

Using workflow run logs

Enabling debug logging

Notifications for workflow runs
