Disabling projects in your organization

In this article

Organization owners can turn off organization-wide projects, organization-wide classic projects, and repository-level classic projects in an organization.

After you disable organization-wide projects, it won't be possible to create new projects at the organization level, and any existing organization-level projects will become inaccessible at their previous URLs. These settings apply to projects and classic projects. Classic projects in repositories in the organization are not affected.

After you disable repository-level classic projects in an organization, it won't be possible to create new classic projects in any repositories in the organization, and any existing classic projects in repositories in the organization will become inaccessible at their previous URLs. Classic projects at the organization level are not affected.

When classic projects are disabled, you will no longer see project board information in timelines or [audit logs](#).

Disabling projects and classic projects in your organization 🔗

1. In the top right corner of GitHub.com, click your profile photo, then click 🏢 **Your organizations**.

2. Next to the organization, click **Settings**.

3. In the "Code planning, and automation" section of the sidebar, click ⊞ **Projects**.

4. Decide whether to disable projects and classic projects in your organization. Then, under **Projects**:

   - To disable projects and classic projects, unselect **Enable Projects for the organization**.
   - To enable projects and classic projects in the organization, select **Enable Projects for the organization**.

5. Click **Save**.

If you decide to re-enable projects and classic projects, any projects and classic projects that were previously added will be available.

Managing classic projects in your organization's repositories 🔗

You can control whether organization members can create classic projects in repositories in your organization. You can still disable classic projects in individual repositories. For more information, see "Disabling projects in a repository."

1. In the top right corner of GitHub.com, click your profile photo, then click 🗐 **Your organizations**.

2 Next to the organization, click **Settings**.

3 In the "Code planning, and automation" section of the sidebar, click ⊞ **Projects**.

4 Decide whether to allow members to create classic projects in repositories in your organization. Then, under **Projects (classic) only**:

- To enable project boards in repositories, select **Allow members to enable Projects (classic) for all repositories**.
- To disable project boards in repositories, unselect **Allow members to enable Projects (classic) for all repositories**.

5 Click **Save**.
