Configuring GitHub Connect

With GitHub Connect, you can access additional features and workflows by connecting your GitHub Enterprise Server instance to GitHub Enterprise Cloud.

About GitHub Connect

GitHub Connect enhances GitHub Enterprise Server by giving you access to additional features and workflows that rely on the power of GitHub.com.

Managing GitHub Connect

You can enable GitHub Connect to access additional features and workflows for your GitHub Enterprise Server instance.

Enabling automatic user license sync for your enterprise

You can manage license usage across your GitHub Enterprise environments by automatically syncing user licenses from your GitHub Enterprise Server instance to GitHub Enterprise Cloud.

Enabling Dependabot for your enterprise

You can allow users of your GitHub Enterprise Server instance to find and fix vulnerabilities in code dependencies by setting up Dependabot alerts and Dependabot updates.

Enabling Server Statistics for your enterprise

You can analyze your own aggregate data from GitHub Enterprise Server and help us improve GitHub products by enabling Server Statistics.

Enabling unified search for your enterprise

You can allow users to include repositories on GitHub.com in their search results when searching from your GitHub Enterprise Server instance.

Enabling unified contributions for your enterprise

You can allow users to include anonymized contribution counts for their work on your GitHub Enterprise Server instance in their contribution graphs on GitHub.com.
