**This version of GitHub Enterprise was discontinued on 2023-03-15.** No patch releases will be made, even for critical security issues. For better performance, improved security, and new features, [upgrade to the latest version of GitHub Enterprise](#). For help with the upgrade, [contact GitHub Enterprise support](#).

# Reviewing your authorized OAuth apps

You should review your authorized applications to verify that no new applications with expansive permissions are authorized, such as those that have access to your private repositories.

1. In the upper-right corner of any page, click your profile photo, then click **Settings**.
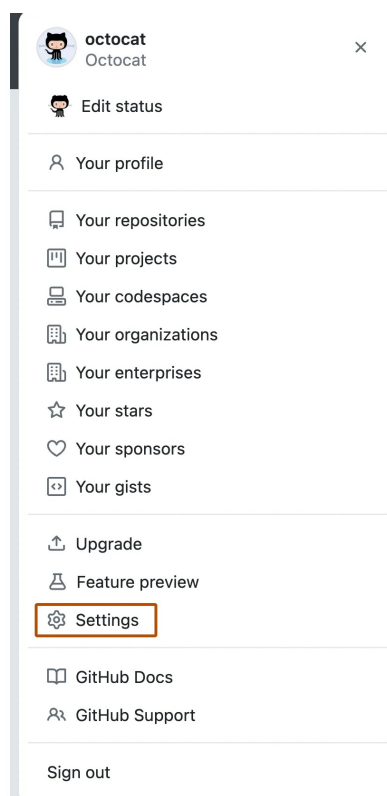

2. In the left sidebar, click **Applications**.

3. Click the **Authorized OAuth Apps** tab.

4. Review the tokens that have access to your account. For those that you don't recognize or that are out-of-date, click •••, then click **Revoke**. To revoke all tokens, click **Revoke all**.

You have granted **9 applications** access to your account.

Sort ▾   Revoke all
