Viewing insights from your project

You can use insights to visualize your projects by creating and sharing charts built from your project's data.

> Insights is available for the new Projects experience, you cannot use Insights with projects (classic). Historical charts are available with GitHub Team and GitHub Enterprise Cloud for organizations. You can save unlimited charts in private projects with GitHub Team and GitHub Enterprise Cloud for organizations and GitHub Pro for users. Users and organizations using a public project can also save unlimited charts. Users and organizations using GitHub Free or a legacy plan can save two charts in private projects. For more information, see "[GitHub's plans](#)."

About insights for Projects

You can view and customize charts that are built from your project's data.

Creating charts

Learn how to create new charts to save your configurations.

Configuring charts

Learn how to configure your charts and filter data from your project.
