Viewing insights for your discussions

In this article

Discussions insights provide data about your discussions' activity, views, and contributors.

Who can use this feature
Repository administrators and people with maintain access to a repository can view the insights dashboard for discussions in that repository. Repository administrators and people with maintain access to the source repository for organization discussions can view the insights dashboard for discussions in that organization.

About the discussions insights dashboard 🔗

You can use discussions insights to help understand the contribution activity, page views, and growth of your discussions community.
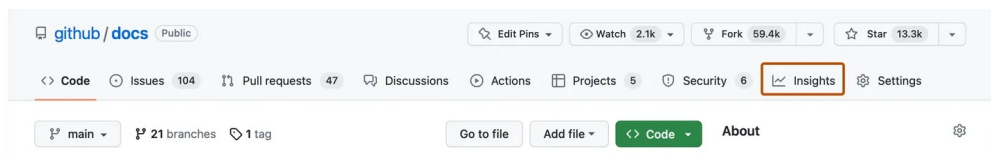

- **Contribution activity** shows the count of total contributions to discussions, issues, and pull requests.
- **Discussions page views** shows the total page views for discussions, segmented by logged in versus anonymous viewers.
- **Discussions daily contributors** shows the daily count of unique users who have reacted, upvoted, marked an answer, commented, or posted in the selected time period.
- **Discussions new contributors** shows the daily count of unique new users who have reacted, upvoted, marked an answer, commented, or posted in the selected time period.
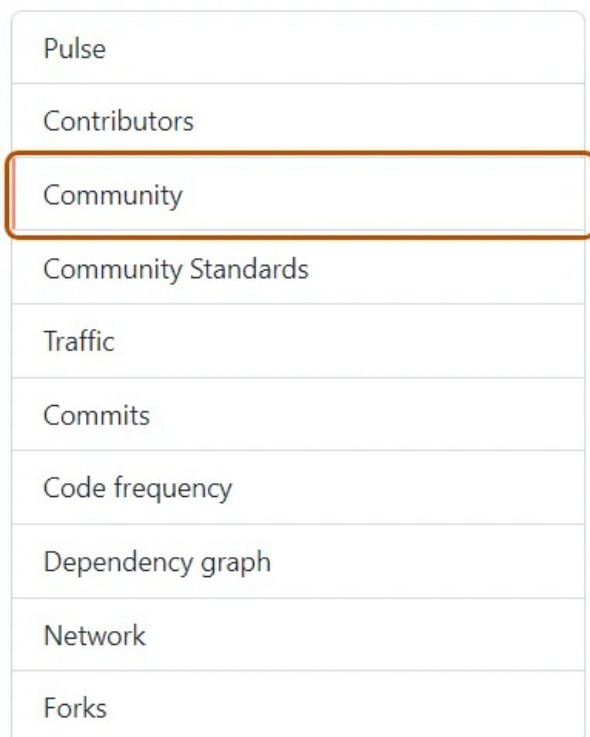

> **Note:** To view the exact data for a time period, hover over that time period in the graph.

Viewing discussions insights 🔗

1. On your GitHub Enterprise Server instance, navigate to the main page of the repository. For organization discussions, navigate to the main page of the source repository.

2. Under your repository name, click 〽 **Insights**.

3. In the left sidebar, click **Community**.

4. Optionally, in the upper-right corner of the page, select the **Period** dropdown menu and click the time period for which you want to view data: **30 days**, **3 months**, or **1 year**.
