# Changing the remote URL for a repository in GitHub Desktop
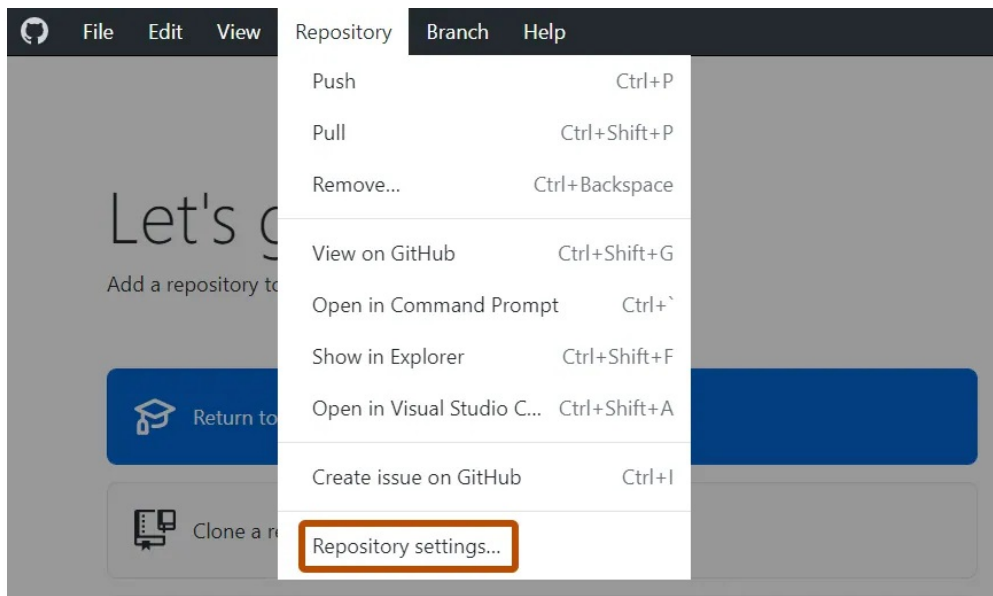

You can change the remote URL for a repository you're working with in GitHub Desktop. You might do this if the repository has been renamed, or the username or organization that owns the repository has changed.

Mac   Windows

1 In the "GitHub Desktop" menu bar, select **Repository** and click **Repository Settings...**.

2 On the **Remote** pane, under "Primary remote repository", type the desired URL.

3 Click **Save**.

1 In the **Repository** menu, click **Repository settings...**.

2 On the **Remote** pane, under "Primary remote repository", type the desired URL.

3 Click **Save**.
