Customizing views in your project

You can create multiple views to look at your project from different angles, deciding which items to show and how to present them.

Changing the layout of a view

You can view your project as a high-density table, as a kanban board, or as a timeline-style roadmap.

Customizing the table layout

You can use the table layout to build a spreadsheet using your project's items, GitHub metadata, and your custom fields.

Customizing the board layout

You can use the board layout to arrange your project's items over customizable columns.

Customizing the roadmap layout

You can use the roadmap layout to view your project's items on a timeline.

Filtering projects

Use filters to choose which items appear in your project's views.

Managing your views

Learn how to create, save, and manage your project views.
