Disabling projects in a repository

In this article
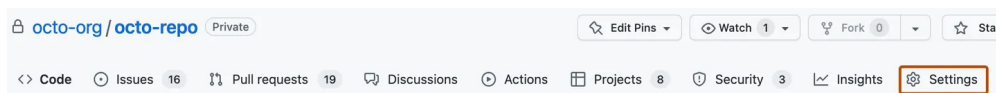

Repository administrators can turn off projects and classic projects for a repository if you or your team choose not to use projects.

Disabling projects in a repository 🔗

When you disable projects in a repository, linked projects will no longer be available in the repository's ⊞ **Projects** tab. Linked projects will remain accessible at an organization or user level.

1. On GitHub.com, navigate to the main page of the repository.

2. Under your repository name, click ⚙ **Settings**. If you cannot see the "Settings" tab, select the ••• dropdown menu, then click **Settings**.

3. Under "Features," unselect the **Projects** checkbox.

Disabling classic projects in a repository 🔗

When you disable classic projects in a repository, existing classic projects are inaccessible at their previous URLs. If you decide to re-enable project boards, any project boards that were previously added will be available.

After you disable classic projects, you will no longer see classic project information in timelines or audit logs.

You can only create new classic projects in a repository if one or more classic projects already exist in the repository. If the repository has no classic projects, this option will not be available.

1. On GitHub.com, navigate to the main page of the repository.

2. Under your repository name, click ⚙ **Settings**. If you cannot see the "Settings" tab, select the ••• dropdown menu, then click **Settings**.
